

Sustainability

Depositing, Cutting, Spraying, Automation

- BAKON is specialised in providing solutions
- >35 years of experience
- 55 dealers and agents world-wide
- Active in >100 countries
- Interesting for you?

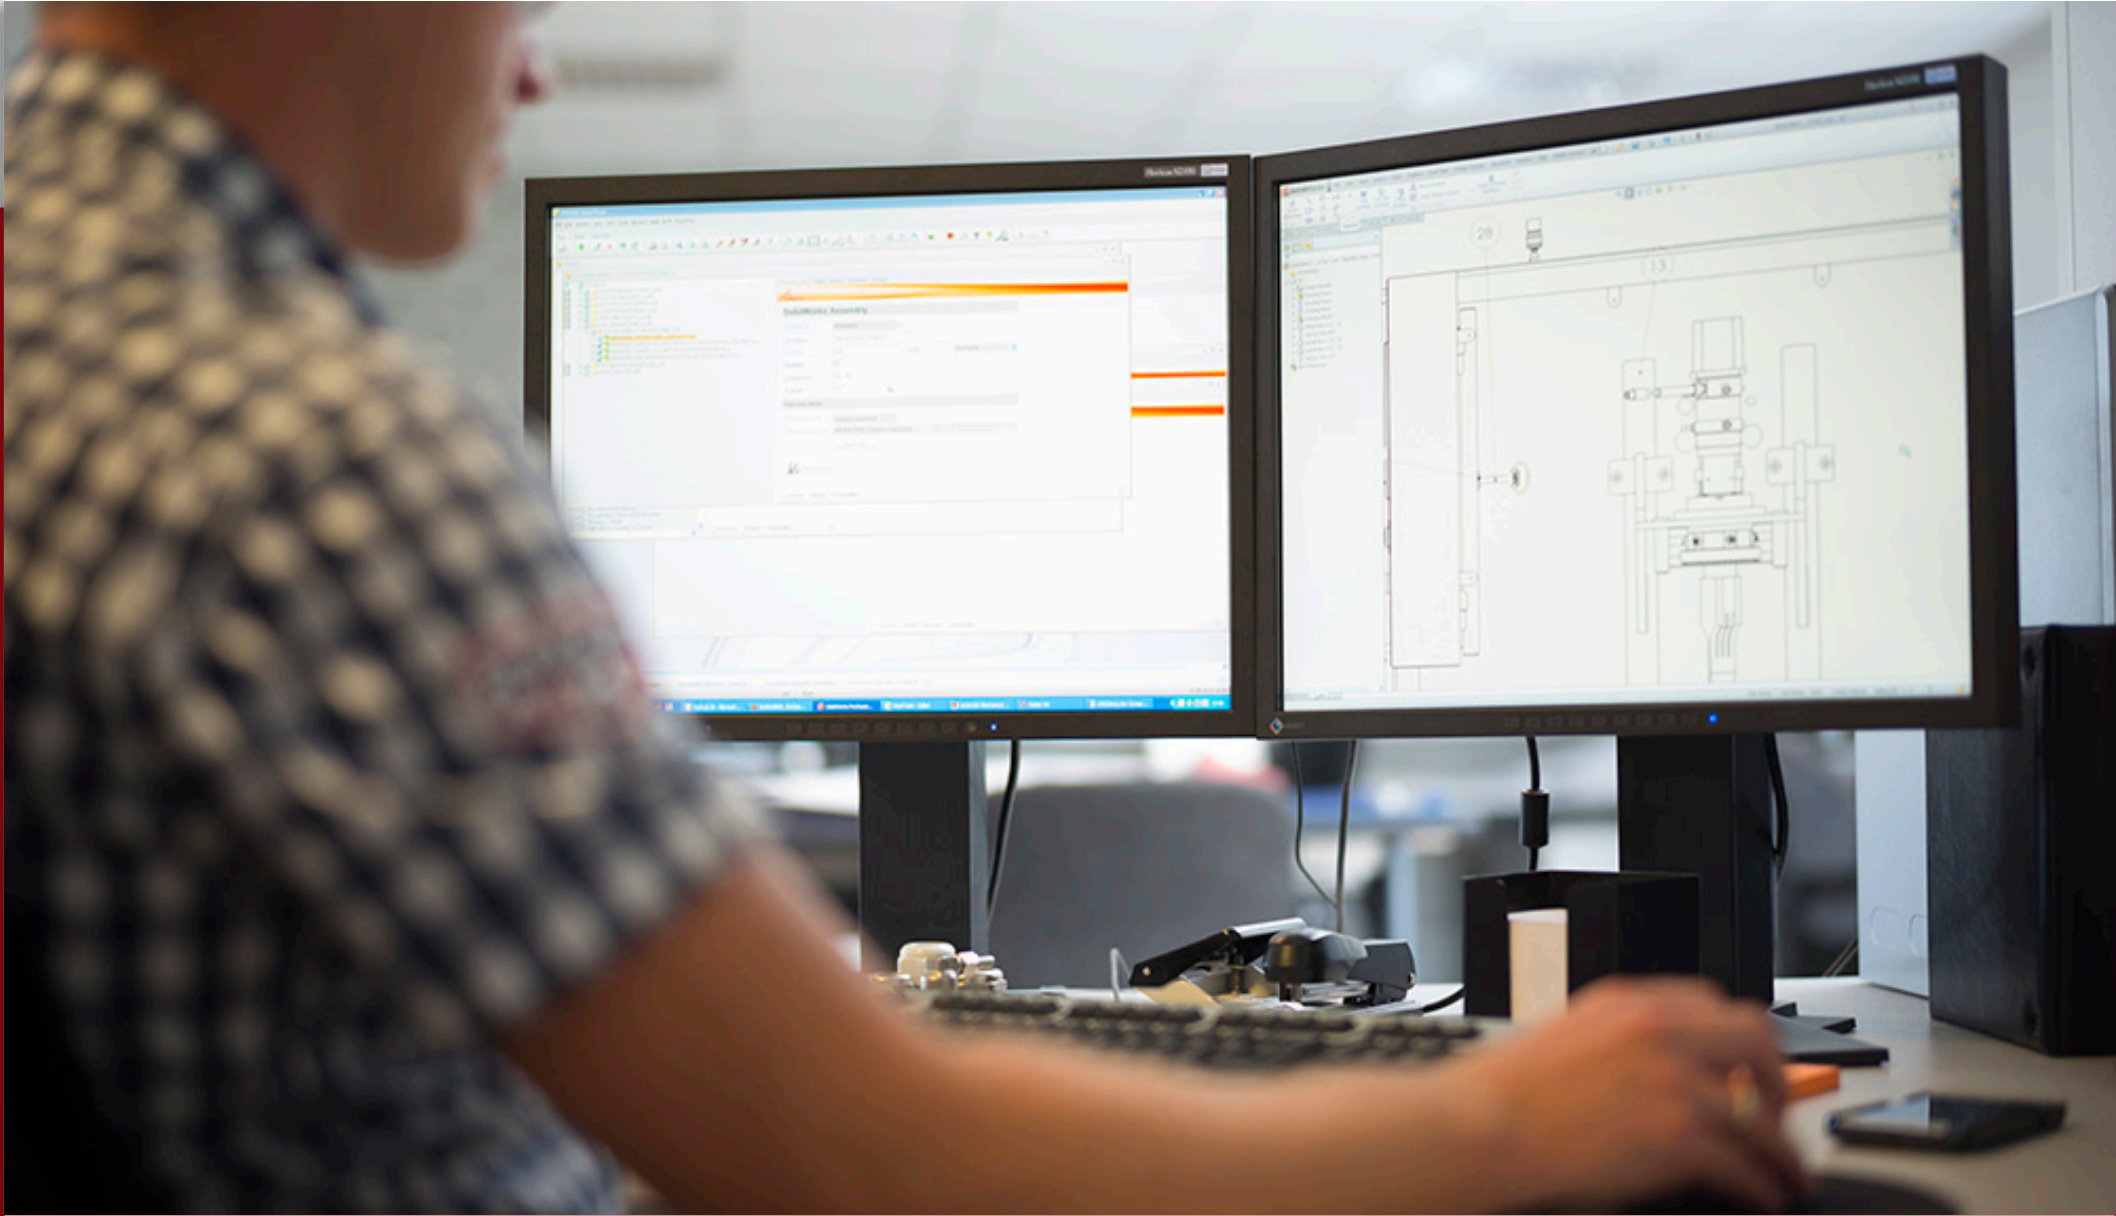

SUSTAINABILITY |

Machine Design

- BAKON machines are developed by our in-house engineers
- Already at the drawing table, they think about using durable materials, and recyclable materials where possible
- BAKON machines are designed with Quality & Robustness highly valued
- That means that our machines are working for years and years without breaking down

SUSTAINABILITY |

Machine Design

- The BAKON BD-range is working already at 4 bars of pressure
- BAKON machines are equipped with energy-saving motors. Our engineers are always looking to provide you with a machine that is using the latest energy standards

Reduction of waste

- Waste is to be kept at a minimum level. We understand that. Even though certain safety measures need to be taken into account, BAKON machines are designed to produce as little waste as possible.
- During tests, we try to use only the products needed to understand the behaviour of your specific product.

Pump Container

Many of our machines are equipped with a pump container for the re-use of products.
